

ConeMount

Bearing Heaters

by SEIFFERT INDUSTRIAL

A lightweight, portable bearing heater that increases bearing life for less downtime and lower maintenance costs.

Proper installation is essential to maximize bearing life. Heating a bearing prior to installation expands the inner race cap to allow the bearing to be easily mounted on the shaft. ConeMount Bearing Heaters can help promote bearing longevity for less equipment downtime and lower maintenance costs.

ConeMount includes a FREE Transport Bag.

Flexible

Each unit is designed to heat a wide range of bearings.

Portable

Most units weigh 3.2kg or less so they can easily be moved close to the equipment being maintained.

Non-Magnetizing

Electric current is not applied to the bearing. Resistance elements heat the unit, which in turn heats the bearing, preventing magnetization.

Affordable

ConeMount units are priced economically or maintenance and repair operations.

Easy to Use

Simply follow the short instruction guide. No complex manuals or training necessary.

Reliable

The simple design of ConeMount units promotes a long product life.
